## Please look my position and achievement for each Company

- **Aswhite Global**

- Build automation project (Selenium C#, NUnit, Extent report)
- Works with CI team to integrate automation test to CI (Team City, Octopus)
- Work with BA, manual tester to collect regression test cases and write test plans base on User stories
- Write and maintain test scripts
- Manage automation configuration (Reduce running time Sprint by Sprint, set up test scripts in parallel, set up run tests on multi machines)
- Help and support automation members
- Analyze report, automation report for each sprint
- Submit defects that are detected by automation team

- **Knorex**

- With senior automation engineer, I have a quick approaching with RUBY Cucumber in 3 days and I scripted more than 600 test cases during working at Knorex and build up test case tool as testLink. I migrated more than 10.000 test cases from wiki to testLink tool. I also familiar with API testing with python in the new project. I am happy for bring values to Knorex.

- **ELCA**

- I joined Web application and Mobile for automation project
- Build automation Thucydides, serenity selenium java project and APPIUM java project (for both iOS and Android)
- Write and maintain automatic tests, analyze and create test report
- Create and maintain automation jobs on Jenkins

- Check Sonar every day and improve code issue
- Clarify user stories, write test plan and test cases
- Execution tests, submit defects and test report
- Join Agile projects.
